2-Way Wireless Wire-Free Keypad WT5500 v1.0 Compatibility Issue

The following programming subsections of Section [851] of the GSM/GPRS Wireless Alarm Communicator GS2065 are not currently supported by the WT5500 v1.1 keypad when used in conjunction with a GS2065 v1.0.

[205] - GPRS Receiver 1 APN
[215] - GPRS Receiver 2 APN
[221] - GPRS Public APN
[222] - GPRS Login User Name
[223] - GPRS Login Password

If one of these programming sections is entered the keypad will freeze until installers programming mode times out or the keypad is powered down/up.

If a GS2065 v1.0 needs to be programmed it is recommended that a WT5500 v1.0 keypad be used to access all programming subsections within Section [851].
